

SPECIFICATION SHEET

Model OS3

OS

The Os-series is a new digital high-speed camera designed to operate in the most demanding environments. The salient design feature of the Os 3 are its compact size combined with a wide data bus, making it capable of achieving very high frame rates (up to 5,000 fps) including transfer speeds to highcapacity solid-state (non-volatile) memory. Configurable DDR options include 16GB and 32GB.

- Optional solid-state, non-volatile memory
- High dynamic range, low noise
- Supports PIV and short-integration modes
